

resistant materials require minimum care.

If used in salt water, be sure to remove the spool and rinse your reel thoroughly in warm fresh water. Then, wipe dry. Do not apply water under pressure, since this simply forces salt water particles into your reel's mechanism. When used in salt water we suggest spraying the metal parts of your reel, after each trip, with a moisture absorbent spray such as WD-40.

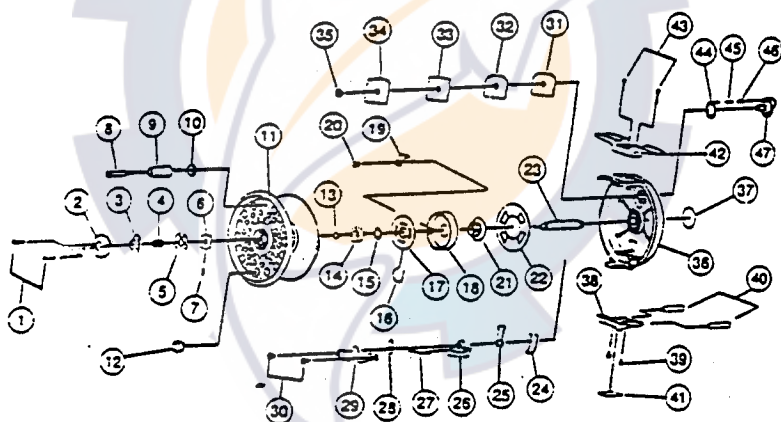

Always remove any sand particles from your reel. Should you accidentally drop your reel in sand or gravel, it may be necessary to disassemble and thoroughly clean all parts before further use. The push button spool removal system on your reel makes this job easy. Apply a high-grade lubricant, such as South Bend "Super Reel Oil" (with Teflon), on all of your moving parts (with the exception of the disc drag system). At least once a year, remove the spool and grease the main shaft with South Bend "Super Reel Grease", which is especially formulated for fresh and salt water reels.

### LIMITED WARRANTY

Crystal River will repair or replace any product which proves defective in workmanship or materials within ninety days from the date of original purchase.

This warranty does not cover damage caused by negligence, accident, misuse, alteration of the product, or normal expected wear. Damage that is determined to be of this nature will be repaired at customer's expense.

**IMPORTANT**—Specify reel model number when ordering parts.  
**Example**—Extra spool for Crystal River Royal Coachman Rim Fly Reel CR-2101—specify CR-2101 (reel no.) - 11 (spool part no.)
